GILAT

NGNMS – AUTOMATED TESTING

Usage examples for: wptest.py | Vitalie Ghelbert - Moldova

Contents

Instalation

- from \\gna2\pituach\Svl\Automation&Simulator copy WP folder to disk C:
- enter C:\WP \setup folder
- Follow install instructions from INSTALL.TXT file.

  For 32 bit Windows, install all programs from 32/ folder in order specified below:

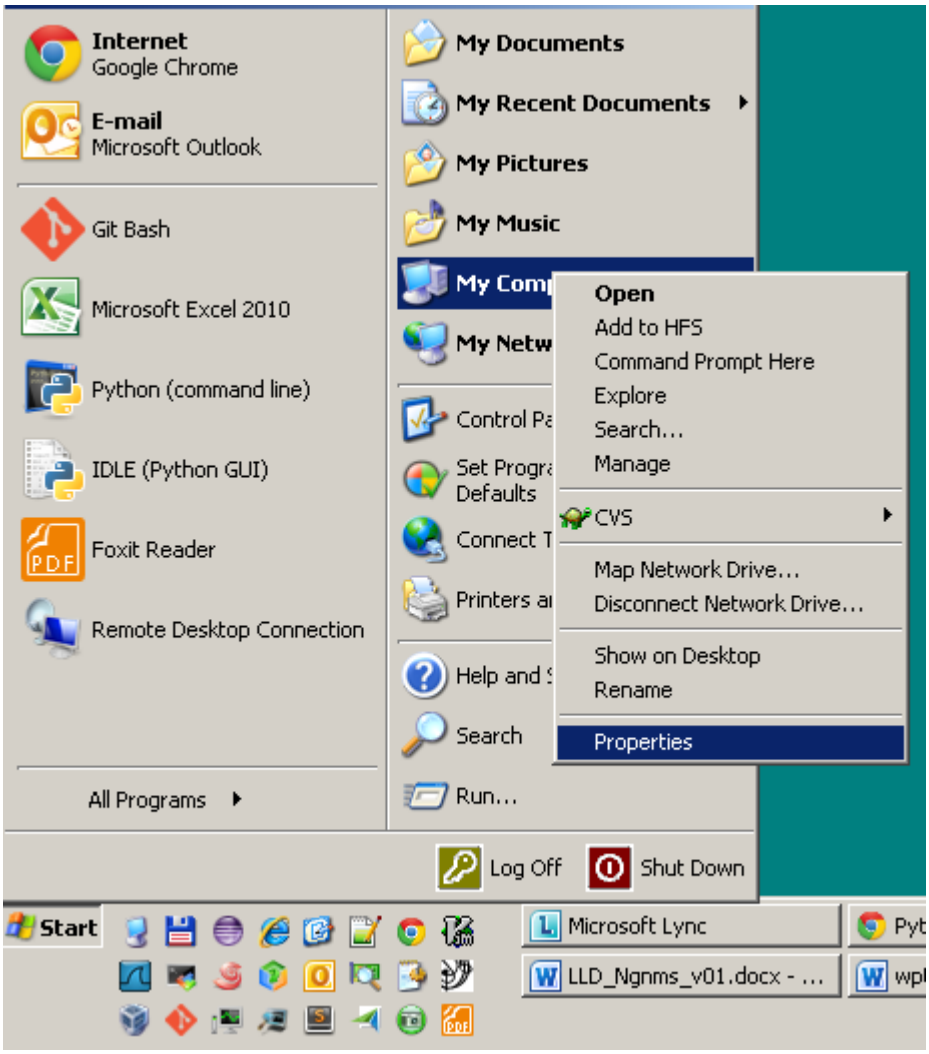
  1. python-2.7.5.msi
  2. setuptools-0.7.4.win32-py2.7.exe
  3. pycurl-7.19.0.win32-py2.7.exe
  4. pyserial-2.7-pre1.win32-py2.7.exe
  5. install_xlutils.bat

  For 64 bit Windows, install all programs from 64/ folder in order specified below:

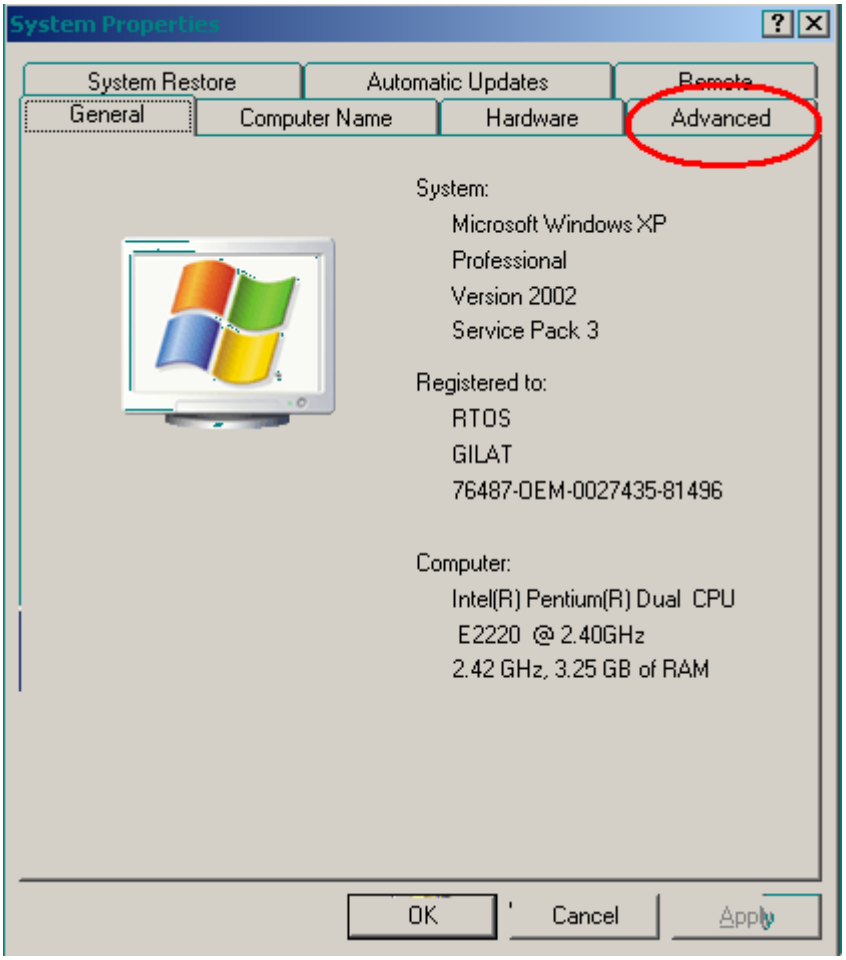
  1. python-2.7.5.amd64.msi
  2. setuptools-0.7.4.win-amd64-py2.7.exe
  3. pycurl-7.19.0.win-amd64-py2.7.exe
  4. pyserial-2.7-pre1.win-amd64-py2.7.exe
  5. install_xlutils.bat

- Add python path to PATH variable: C:\Python27; C:\Python27\Scripts;

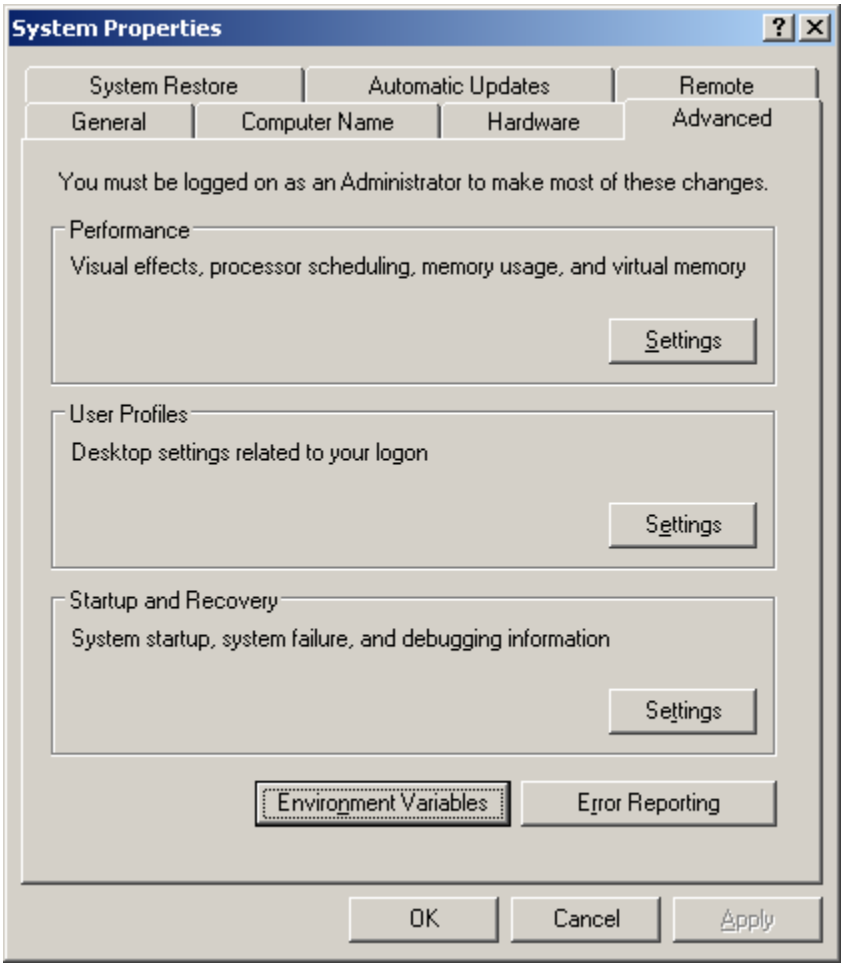
1. Click Start button, then right click on My Computer and click Properties (see picture below).



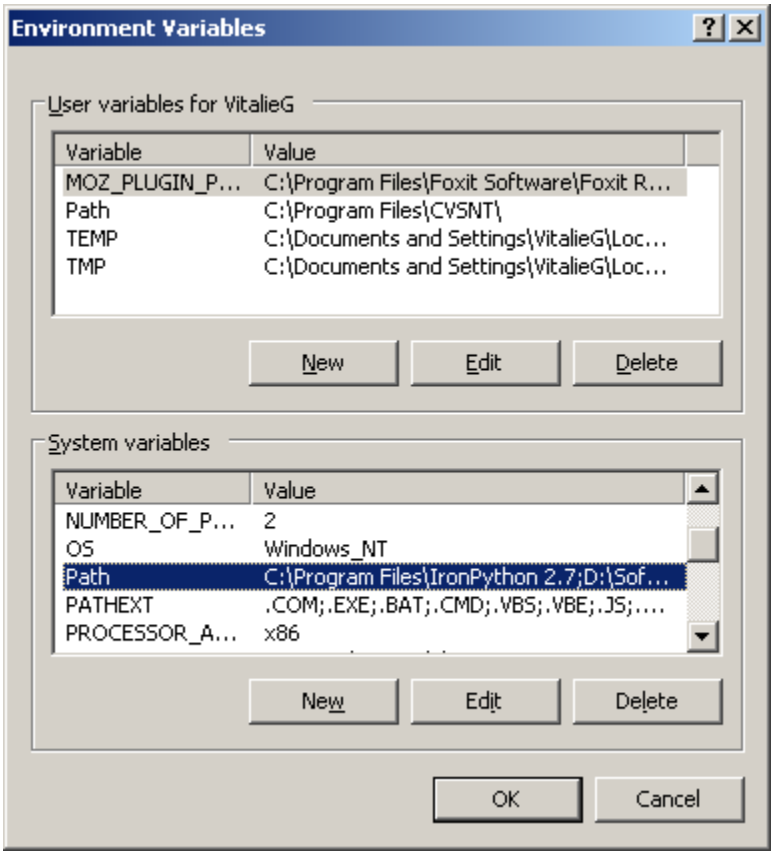
2. Then click on Advanced Tab.

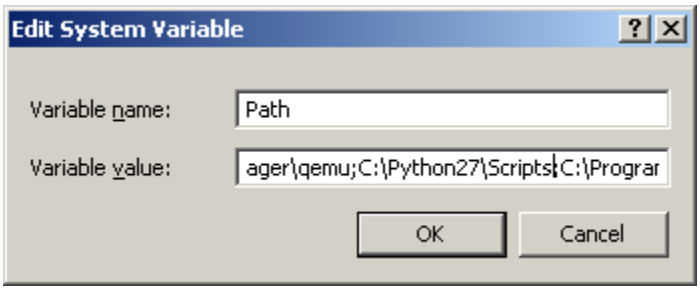


3. Click on Environment Variables.



4. From there, find Path variable and press Edit button:
   Copy and Paste C:\Python27; C:\Python27\Scripts; and press OK.
   Note: don't miss (;) at the end!





Example

Real working example flow:

1. open C:\WP\ngnms\data\demo.xls
2. open command prompt to C:\WP\ngnms
3. show DLF configuration file:

   wptest.py --dlf show
4. configuring DLF file C:\WP\ngnms\configs\dlf.ini
5. setting and setup DLF with:

   wptest.py --dlf setup

   wptest.py --dlf set

   NOTE: set “serial = 0” in C:\WP\ngnms\configs\dlf.ini if needed DLF connection over TCP.
6. show VSAT enabled configurations with:

   wptest.py --show vsat
7. show HUB enabled configurations with:

   wptest.py --show hub
8. show enabled TESTCASES with:

   wptest.py --show test
9. correct VSAT and/or HUB configurations into C:\WP\ngnms\data\demo.xls
10. check VSAT with:

    wptest.py --check vsat
11. check HUB with:

    wptest.py --check hub
12. If VSAT, HUB, DLF are ok, we could run one TESTCASE with:

    wptest.py --run --name 2

    Note: this will run TESTCASE number 2. To run all TESTCASES:

    wptest.py --run
13. When program finished to run, you could check for result in:
    C:\WP\ngnms\data\output

Usage examples

Show help

```
C:\WP\ngnms>wptest.py --help

Usage: wptest.py [options]

Copyright 2013 Gilat

Options:
  --version           show program's version number and exit
  -h, --help          show this help message and exit
  -c DEVICE, --check=DEVICE
                      check [hub, vsat]'s status.
  -n NAME, --name=NAME  vsat name to check.
  -s INFO, --show=INFO  show [all, hub, vsat, test]'s info.
  -d, --disabled        show disabled rows only.
  -i INFILE, --in-file=INFILE
                      testcases input file [default: data/demo.xls]
  -r, --run           run one or [default:enabled] test cases
  --dlf=DLF           dlf state [show, check, set, setup]

wptest.py - read and run test cases from excel file.
```

Show active vsat's

- wptest.py --show vsat
- wptest.py --show vsat --disabled

```
C:\WP\ngnms>wptest.py --show vsat

Show DLF configurations:

C:\WP\ngnms>**wptest.py --dlf show**

serial = 1
serial_port = COM1
serial_baudrate = 19200
tcp_ip = 192.168.140.76
tcp_port = 1001

Note: change serial = 0 to connect over TCP to DLF device.

[Action]
default = 0
constant = 1
trapeze = 0
sinus = 0
saw = 0
connectivity = 0

[DefaultsComp]
ib_noise = 1
ob_noise = 1
noise_output = 0
sync = 1
mesh = 0
etc …

Checking DLF connection:

C:\WP\ngnms>**wptest.py --dlf check**

status:\> Serial<id=0xc9c790, open=True>(port='COM1', baudrate=19200, bytesize=8, parity='N', stopbits=1, timeout=None, xonxoff=False, rtscts=False, dsrdtr=False)
status:\> checking serial port: COM1
status:\> port open: True
status:\> closing port: COM1
status:\> port open: False

Setting DLF device:

```
C:\WP\ngnms>wptest.py --dlf set

status:\> setting DLF defaults.
status:\> sending data over serial: COM1
status:\> finished!

C:\WP\ngnms>wptest.py --dlf setup

status:\> setting DLF defaults.
status:\> sending data over serial: COM1
ib_noise = 1 -> 90060D
ob_noise = 1 -> 93060D
noise_output = 0 -> 92000D
sync = 1 -> 91070D
mesh = 0 -> 8F000D95000D
status:\> finished!
```

Run one particular test

- **wptest.py --run --name 1**

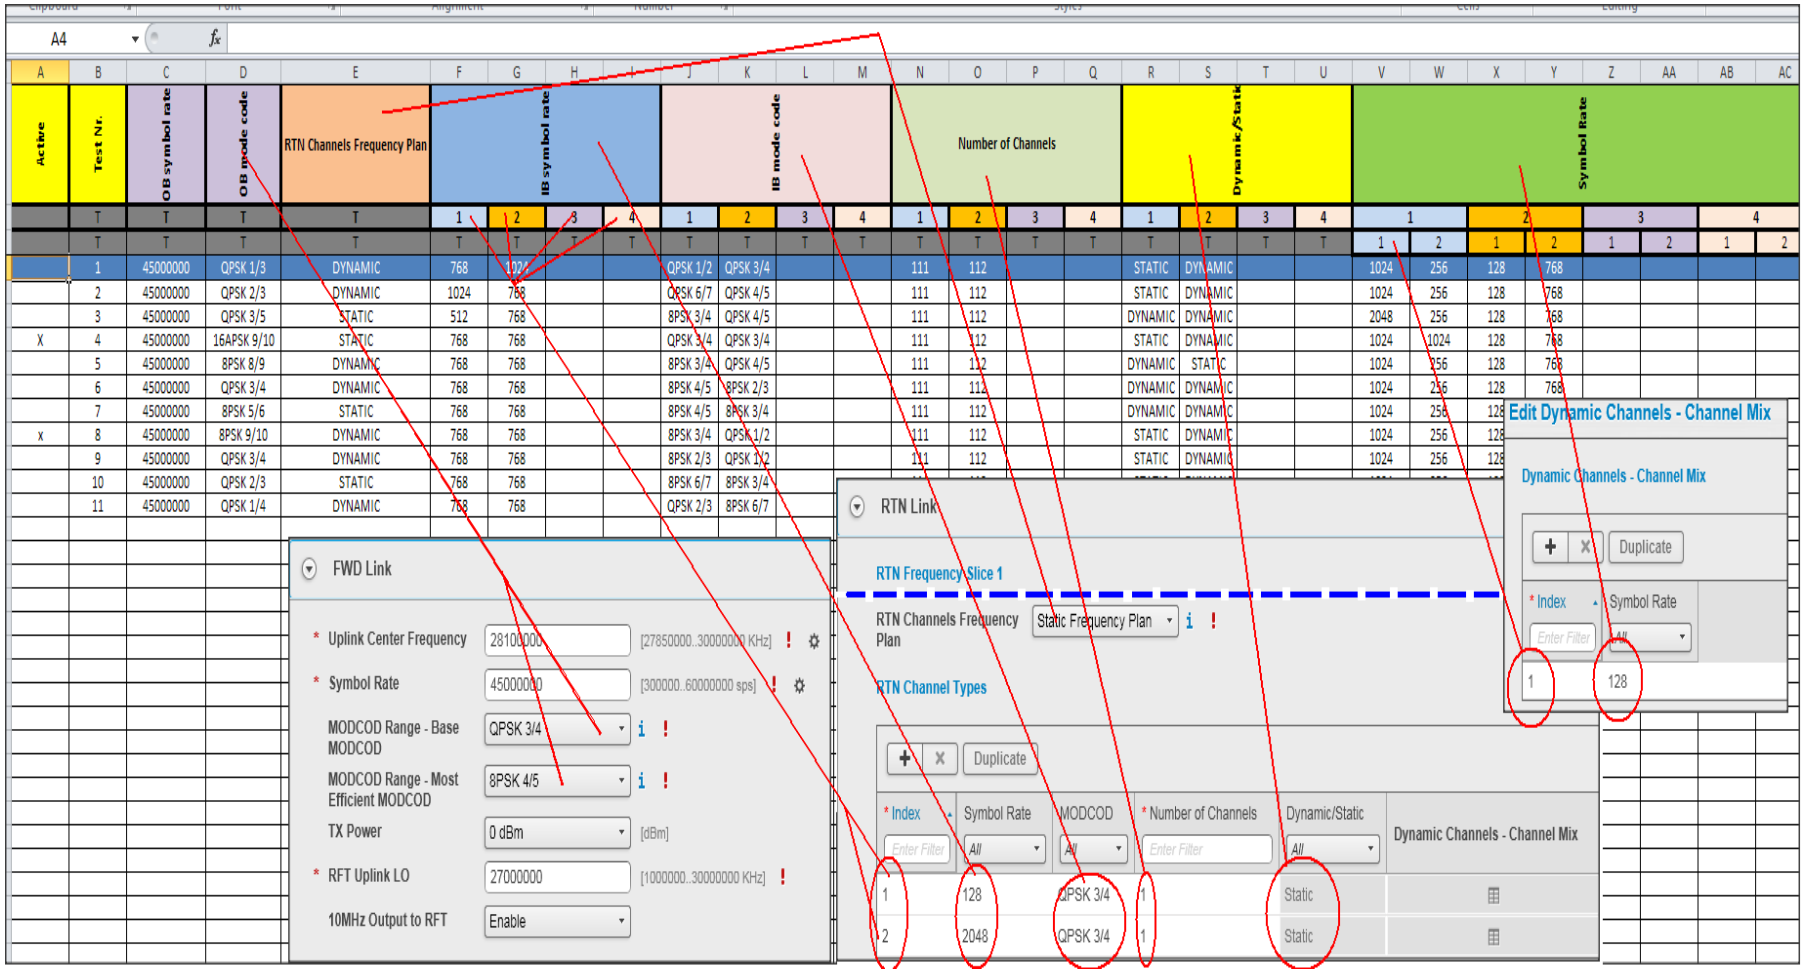
Run all active test cases

- **wptest.py --run**

Note: to run all disabled tests use --disabled option.

- **wptest.py --run --disabled**

Configuring TESTCASES



By default, you could use demo.xls file from data directory: C:\WP\ngnms\data\demo.xls

Hint: Make a copy before changing demo.xls file.

You can specify witch input file to use with -i option:

Example:

wptest.py -i data/demo.xls --run --name 4

That will read test cases from [data/demo.xls] file, and store to [data/output/] directory.

NOTE: by default, [data/demo.xls] is used if no (-i) option in provided.

Data from output.xls file after running test

AG	AH	AI	AJ	AK	AL	AM
Max IB bit rate [kbps]	Max OB bit rate [kbps]	VSAT CPU [IB] [OB]	Number of transmitted OB packets	Number of received IB packets	Number of OB retransmit packets	Channel
S	S	S	S	S	S	S
0	0	[10]/[10]	0	0	0	TS Id:0 TRF 2-ATM QPSK 1/2 256000 Sps
0	0	[10]/[10]	0	0	0	TS Id:0 TRF 2-ATM QPSK 1/2 256000 Sps

Configuring HUB.
